I think I experience the same thing...
Here's the situation

I installed the latest Alphacontent on my localserver and words fine but when I installed it in my web hosting it does not work.

Both using Joomla 1.0.13

Hello,

Modify your var \$mosConfig_absolute_path in your configuration.php file.

I believe my \$mosConfig_absolute_path is correct

What else can it be?

Hello.

I tried to install the very same component on different web hosting and this time it works very well..
What could have gone wrong?

Please help.
