
How-To turn off mXcomment on front-end? (2)

Posted by rblom - 2008/01/02 16:18

Hello,

Thank you for your very nice extension.

Unfortunately I cannot disable mXcomment on front-end. I already tried the suggestion <http://www.visualclinic.fr/forum/func,view/id,751/catid,14/#msg751>.

Is there any other solution?

Thank you in advance.

Rob

Hello,

Open the config of maxcommentbot in your mambots/plugins manager and set your parameters.

That does unfortunately not work. I have tried this several times but no result. I also re-installed the extension but also that did not solve this issue.

Do you have another suggestion?

Thank you again.

Rob

How -To turn off mXcomment on front-end? (2)

Posted by Jadzia - 2008/01/10 03:29

I have the same problem

1.5 RC4

Joomla! 1.5.0 Production/Stable 19-December-2007 19:00 GMT

I have installed the application on both www.motorsportinsight.com and www.motorsportinsight.nl, on both sites I disabled on front-end and on intro but still it is displayed.

Hi gents,

mXcomment great component, isn't it? But ...

Did anybody find a solution of this problem?
I have the same case with intro and frontpage.

It will be great to understand how to solve it.

Thank you in advance.

You can turn off mXcomment on the frontend:
Please, just disabled this option in the admin panel of the mambot named maxcommentbot.

Dear admin,

Thx for your replay. But unfortunately it does not work. I tried to do it but had no any results. I have Joomla 1.5 in Legacy mode. Probably I can to do something additional. I mean code changing or something else?

Thank you in advance.

I also have the same problem. I am having a site www.kseboa.org. In the front page I have main article and 4 other latest articles for each section.

Mxcomments works fine in all pages except front page. In the front page, the layout of 4 latest articles except leading article gets affected.

I disabled the plugin in front page.

Is there any way to completely disable the plugin in front page?

I am using latest joomla version 1.5.8

I am having trouble understanding how the admin cannot troubleshoot his/her own issue.

I am having this same exact problem. MxComment works great on all page EXCEPT the front Page. I am trying to upgrade my site to joomla 1.5, and I need this to be working properly.

Admin,

I have disabled front-end through the plugin section. When that failed, I opened the mxcommentbot file itself and realized that the parameters set through the Joomla Admin section did not write to the bot file. notshowfrontend was set to 0 when it should have been set to 1. I set it to 1, and it STILL shows up on the frontend.

Please let us know what the solution is!!!!!!
