
Having a seperate Mambot for \"Quote this article\"

Posted by koltz - 2008/02/09 03:38

I posted a message in the main english area about trying to integrate mxComment with jReviews. While I had a ton of views, no responses which I am guessing might be pretty technical since jReviews is encrypted. Anyway, what I love is your "Quote this article" feature that creates a little banner people can add to their website. Is there anyway to get this as a separate mambot/plugin of some sort?

Thanks,

Corey

I think about this idea.
