
Sitemap for Alphacontent

Posted by jajupreetam - 2008/03/04 15:08

Hi,

I have AlphaContent component installed in my website. Also , I have set the 'Home' as to show alphacontent component on my homepage that will display all the section & category in my website.

Now, I am looking for some component that will generate the sitemap for alphacontent.

I tried with XMap, JooMap, etc. But I am not getting section & category displayed in Map.

Note: I have Artio JoomSEF installed in my site & 'Home' is the only link that will display all section & category on my Homepage.

Please Help.How can I achieve it?

Please Help.

hi,

I think you can use RD Sitemap + install Google Sitemap Generator component. All that you can find on joomla.org

hello, could you please tell me some advise on

the googlemap addon you've chosen

how to put alpha content in each page

???

thank you
