
Modules and component navigation on all pages

Posted by gchancy - 2008/03/11 06:52

Hello -

On a fresh install of 3.0.3 and Joomla 1.0.13 I am seeing that the mod_alphacontent_section_with_image module is showing on all pages with content (static and regular content). I have the module selectively published to only two pages, but all non-component pages show the module.

Same thing occurs with navigation pathway and with the Alphasearch. These two functions (if enabled) show on all pages.

There seems to be several issues opened in the forum related to this. Do you have a possible fix?

Thanks,

Glen
