
content on category/section

Posted by lucasmontan - 2008/03/17 21:22

does anyone know how to show the content of the specific section or category when access by alphacontent? the component simply ignore it..

thanks!

Not sure i understand the question fully, but you are able to specify in both the Alphacontent config, and the menu item you create, what section and or category to display. Hope that helps.
