
Issues under J! 1.5.2

Posted by theant - 2008/04/09 10:21

Hi

there are those issues with mXcomment 1.7 under Joomla! 1.5.2:

- Security Images (5.0 beta3) doesn't appear

- Disabled all core elements into mXcomment (author, date, latest update, Section, Category...), the default ones (author and date) and the default icons appear at the end of the page, under the comment form instead under the title. The plugin is the last into the list for content type except "Content - Pagebreak" because this has the 1000 order number by default. I don't know if it is important, I've installed the AuthorDtails plugin.

- last question: how can I pay to remove the copyright lines?

Regards
