
sh404SEF Issue

Posted by numb_scot - 2008/05/27 03:07

Hi,

I have just upgraded to mxComment 1.0.8 and I have noticed an issue with sh404SEF 1.0.4 and mxcomments.

I am Running J! 1.5.2

When sh404SEF is enabled the 'read more' links point to e.g. <http://localhost/?task=view> and does not work. However when I disable sh404SEF the link points to <http://localhost/the-family/287.html?task=view> and works fine.

I don't know if this is an mxComment or sh404SEF issue so I am posting in both forums.

Cheers in advance for any assistance.

Cheers,
Eoin

Same here, I have tried to disable the URL process in sh404SEF (under configuration -> by component) but still got the 404 error page.

Hi,

Same problem.
Have you found a solution?

Thanks,
Pablo

Not really

i deactivate the com_maxcomment component url optimisation in sh404sef configuration (but like you i have still issues with user comments link and read more link)

what i did was to pass the com_content component as well in sh404sef configuration and everything comes back to normal but... there is no more url optimisation for any articles !

What i suspect is that mx_comment redirect "user comments" link and the "read more" link to com_content component. By the way sh404sef make an url optimisation (unless you pass com_content component in the sh404sef config).

May be if mxcomment have it's own redirect system without redirecting to com_content, things would work (the "pass" configuration of the sh404sef component will work correctly)

Regards

I am also having this issue and looking into how I can fix it. Sorry I have nothing positive to contribute at the moment, but wanted to make sure this is fully documented.

I am running:

Joomla 1.5.6

MxComment 1.0.9

sh404sef 1.011 (1.5 native)

Hello,
i have the same problem link read more DONT WORK. BUT if i uninstall this component (which say compatibility for J15, but no), i cant enable show standard more read link nor title of content.
Now i must use unworking comment system:(Here is a long time about this problem, but nothing solution here... I want donate, becaause your work help me, but now i dont know...
